Other products may be trademarks or registered trademarks of their respective manufacturers. 		
Safety Instruction	s and Approval		
	 Read the installation guide thoroughly before you set up the router. 		
Safety Instructions	 Read the installation guide thorotoging before you set up the rotter. The router is a complicated electronic unit that may be repaired only be authorized and qualified personnel. Do not try to open or repair the router yourself. Do not place the router in a damp or humid place, e.g. a bathroom. The router should be used in a sheltered area, within a temperature range of +5 to +40 Celsius. Do not expose the router to direct sunlight or other heat sources. The housing and electronic components may be damaged by direct sunlight or heat sources. Do not deploy the cable for LAN connection outdoor to prevent electronic shock hazards. Keep the package out of reach of children. When you want to dispose of the router, please follow local regulations on conservation of the environment. 		
Warranty	We warrant to the original end user (purchaser) that the router will be free from any defects in workmanship or materials for a period of two (2) years from the date of purchase from the dealer. Please keep your purchase receipt in a safe place as it serves as proof of date of purchase. During the warranty period, and upon proof of purchase, should the product have indications of failure due to faulty workmanship and/or materials, we will, at our discretion, repair or replace the defective products or components, without charge for either parts or labor, to whatever extent we deem necessary tore-store the product to proper operating condition. Any replacement will consist of a new or re-manufactured functionally equivalent product of equal value, and will be offered solely at our discretion. This warranty will not apply if the product is modified, misused, tampered with, damaged by an act of God, or subjected to abnormal working conditions. The warranty does not cover the bundled or licensed software of other vendors. Defects which do not significantly affect the usability of the product will not be covered by the warranty. We reserve the right to revise the manual and online documentation and to make changes from time to time in the contents hereof without obligation to notify any person of such revision or changes.		
Be a Registered Owner	Web registration is preferred. You can register your Vigor router via http://www.draytek.com.		
Firmware & Tools Updates	Please consult the DrayTek web site for more information on newest firmware, tools and documents. For more detailed information, please refer to http://www.draytek.com.		
POWVERED AND AND AND AND AND AND AND AND AND AN	Parts of the anti-virus features are powered by Kaspersky Lab ZAO. For more detailed information, please refer to http://www.kaspersky.com.		

European Community Declarations

Manufacturer:DrayTek Corp.Address:No. 26, Fu Shing Road, HuKou County, HsinChu Industrial Park, Hsin-Chu, Taiwan 303Product:VigorPro 5500

DrayTek Corp. declares that VigorPro 5500 Series is in compliance with the following essential requirements and other relevant provisions of R&TTE Directive 1999/5/EEC.

The product conforms to the requirements of Electro-Magnetic Compatibility (EMC) Directive 89/336/EEC by complying with the requirements set forth in EN55022/Class A and EN55024/Class A.

The product conforms to the requirements of Low Voltage (LVD) Directive 73/23/EEC by complying with the requirements set forth in EN60950.

Regulatory Information

Federal Communication Commission Interference Statement

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the use is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different form that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference, and

(2) This device may accept any interference received, including interference that may cause undesired operation.

Taiwanese BSMI (Bureau of Standards, Metrology and Inspection) A Warning:

Warning: This device might cause interference of radio frequency under the environment of dwelling. In such condition, the users might be asked to adopt some proper strategies.

Please visit "www.draytek.com/about_us/Regulatory.php"

This product is designed for the 2.4 GHz WLAN network throughout the EC region and Switzerland with restrictions in France.

This is a class A product. In a domestic environment, this product may cause radio interference in which case the user may be required to take adequate measures.

1. Introduction

VigorPro 5500 Series is an all-in-one **Anti-Virus, Anti-Intrusion and Anti-Spam security appliance** for SOHO and branch office. VigorPro 5500 Series provides real-time network protection against viruses, worms and malicious programs via e-mail, FTP and web browser. The rule-based website content filtering blocks improper connection to internet in flexible way. With DrayTek's DrayOSTM as kernel, VigorPro 5500 Series provides robust and stable VPN, firewall and routing functionality as well.

Unlike legacy proxy-based anti-virus anti-intrusion solution, which stores data in files format prior to scan the content in streaming, the VigorPro 5500 equips with hardware-based scan engine. VigorPro 5500 Series scans packet stream go through it in real-time before those specious content get into the network without performance downgrade. Thus provides a protection of whole network against any intrusion and malicious program in real-time.

DrayTek provides customer free access to the latest virus/hacker signature for and information update for a period of time. Considering customer's needs to minimize supporting effort, DrayTek support team also provides service for VigorPro 5500 Series to get the latest signature updated from DrayTek's server automatically. The all-in-one design makes network management simple and easy.

Features for VigorPro 5500 Series

- Easy Internet-sharing of your broadband connection
- Unified Security Firewall to help protect your network from external viruses and intrusions
- Real-time virus/intrusion signature scanning with hardware-based scan engine to protect your network

1.2 Package Content

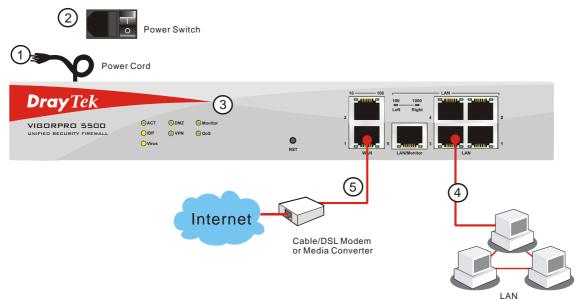

2. Installing Your Vigor Router

This section will guide you to install the router through hardware connection and configure the router's settings through web browser.

Before starting to configure the router, you have to connect your devices correctly.

- 1. Connect the power cord to the router's power port on the rear panel, and the other side into a wall outlet.
- 2. Power on the device by pressing down the power switch on the rear panel.
- 3. The system starts to initiate. After completing the system test, the **ACT** LED will light up and start blinking.
- 4. Connect one end of an Ethernet cable (RJ-45) to one of the LAN ports of the router and the other end of the cable (RJ-45) into the Ethernet port on your computer (that device also can connect to other computers to form a small area network). The LAN LED will light up according to the network card feature (10Mpbs or 100Mpbs) of the device that it connected.
- 5. Connect a modem/router (depends on your requirement) to any WAN port of router with Ethernet cable (RJ-45). The **WAN1/WAN2** LED (down/up) will light up according to the network card feature ((10Mpbs or 100Mpbs) of the device that it connected.

(For the detailed information of LED status, please refer to section 1.1.)

This page is left blank for remark if necessary.

3. Configuring Web Pages

The **Quick Start Wizard** is designed for you to easily set up your router for Internet access. You can directly access the **Quick Start Wizard** via Web Configurator.

1. Make sure your PC connects to the router correctly.

Notice: You may either simply set up your computer to get IP dynamically from the router or set up the IP address of the computer to be the same subnet as **the default IP address of Vigor router 192.168.1.1**. For the detailed information, please refer to the later section - Trouble Shooting of the guide.

2. Open a web browser on your PC and type http://192.168.1.1. A pop-up window will open to ask for username and password. Do not type any word on the window and click **OK** for next screen.

Connect to 192.1	68.1.1 🛛 🖓 🔀
	GR
Login to the Router V	/eb Configurator
User name:	2

	nges if necessary. Otherwise, click Finish to save the current

4. Registration for the Router

Now you can surf on Internet freely. It is time to continue the registration and activation of your router for using the functions of anti-intrusion, anti-virus and anti-spam.

To use the anti-intrusion, anti-virus and anti-spam features of VigorPro series router, you have to create a new account, finish the registration for that account by using the router and complete the registration for the Vigor router. After finishing the registration of the router, you can download the newly update types and rules of anti-intrusion and anti-virus during the valid time of the license key you purchased.

There are two ways to create and activate new account. One is created by accessing www.vigorpro.com (refer to section 4.1), the other is from router's web configurator (refer to section 4.2).

After activating the new account, you have to register your router from router's web configurator (refer to section 4.3). Follow the steps listed below to finish the registration and activation.

4.1 Creating and Activating an Account from VigorPro Website

To activate anti-virus/anti-intrusion/anti-spam function, you need to register an account on www.vigorpro.com firstly. Please follow the steps below to create a new account.

1. Open your browser with URL: **www.vigorpro.com**. Find the line of **Not registered yet?**. Then, click the link **Click here!** to access into next page.

2. Check to confirm that you accept the Agreement and click Accept.

4.3 Registering Your Vigor Router

You have activated the new account for the router. Now, it is the time for you to register your vigor router. There are two ways to register your vigor router. One is to register by opening **System Maintenance** >>**Signature Upgrade**; the other is to register by using **Anti-Spam**>>**Profile Setting**. Registering Vigor router should be done just for once. **If the router has been registered previously, the system will not allow you to register the router again.** After finishing the router registration, you can activate Anti-Virus, Anti-Intrusion and Anti-Spam respectively.

From System Maintenance >>Signature Upgrade

- 1. Open a web browser on your PC and type http://192.168.1.1. A pop-up window will open to ask for username and password.
- 2. From the router's web page, please open **System Maintenance** >>**Signature Upgrade**. You will see the following web page.

Action

Activate : It allows the user to activate the service provider (DT-DT and DT-KL) dedicated to the router. If the record of the license key exists, the button "Upgrade" will show up instead.

Apply: It allows the user to adopt the selected service provider on the router. It also enables the user to switch one key to the other.

7. In this page, type the License Number stated on the Anti-Spam license card in the field of License Number. Then, click Add License.

4.5 Backup and Upgrade Signature for Anti-Intrusion/Anti-Virus

You can get the most updated signature from DrayTek's server if the license key of anti-virus/anti-intrusion for the VigorPro 5500 is not expired. Before you upgrade the signature, please check the validation information either from WEB user interface of VigorPro 5500 or account information from www.vigorpro.com.

- 1. Open a web browser on your PC and type http://192.168.1.1. A pop-up window will open to ask for username and password. Do not type any word on the window and click OK.
- 2. From the router's web page, please open **System Maintenance** >>**Signature Upgrade**. You will see the following web page.

System Maintenance

- System Status
- Administrator Password
- Configuration Backup
- SysLog / Mail Alert
- Time and Date
- Management
- Reboot System
- Firmware Upgrade
- Signature Upgrade
- 3. On Signature Upgrade web page, locate Backup and Download Now!!!.

System Maintenance >> Signature Upgrade

Time for Backup

Before changing other license, it is suggested for you to backup the original signature first. To backup current signature information with the filename vigorpro.sig, click **Backup**.

Time for Download

After changing other license, it is suggested for you to download newly update signature for your router. To download newly update anti-intrusion and anti-virus from VigorPro website, please click **Download Now!!!**.

Time for Import

Backup files can be imported whenever you want. To use a saved signature information, please click **Import**.

In addition, users can specify certain time for executing the upgrade automatically by the router. Remember to check the **Schedule Update** box and click **OK** to activate the time settings.

4.6 Enabling Anti-Virus/Anti-Intrusion/Anti-Spam

Firewall >> General Setup

After applying an account, registering your account and router, you have to access into the web page of Vigor router to enable Anti-Virus/Anti-Intrusion/Anti-Spam function. There are two ways to enable it.

A. For the default rule of firewall, please open **Firewall>>General Setup** page. Check the box of **Enable** for Anti-Intrusion and choose proper action (profile) from the drop down list of Anti-Virus and Anti-Spam. Next, click **OK** to finish the procedure of activation.

Call Filter	💿 Enable	Start Filter 9
	🔘 Disable	
Data Filter	💿 Enable	Start Filter 9
	🔘 Disable	
••		
Filter		Pass 🚩
Filter <u>Content Security I</u>	<u>Management</u>	Pass 💙 None 💙
	<u>Management</u>	
Content Security I	<u>Management</u>	None 🖌

B. For specified filter rule (there are twelve filter sets in Firewall, and each set is allowed to set seven filter rules), please check the box of **Enable** for Anti-Intrusion and choose proper action (profile) from the drop down list of Anti-Virus/Anti-Spam. Next, click **OK** to finish the procedure of activation.

Check to enable the Filter Rul	e		
Comments:	Block NetBios		
Index(1-15) in <u>Schedule</u> Setup:	,,,,]	
Direction:	LAN -> WAN 💌		
Source IP:	Any	Edit	
Destination IP:	Any	Edit	
Service Type:	TCP/UDP, Port: from 137~139 to any Edit		
Fragments:	Don't Care 🐱		
Application	Action/Profile	Syslog	
Filter:	Pass If No Further Match 💌		
Branch to Other Filter Set:	None 💌		
Content Security Management:	None 💌		
Anti-Virus:	None 🐱		
Anti-Intrusion:	🔲 Enable		
Anti-Spam:	None 🗸		

Firewall >> Edit Filter Set >> Edit Filter Rule

If you **do not** check the Anti-Intrusion box and choose a proper profile for Anti-Virus/Anti-Spam, you still **cannot use** the Anti-Intrusion/Anti-Virus/Anti-Spam function even if you finished all the relational profiles configuration.

5. Trouble Shooting

This section will guide you to solve abnormal situations if you cannot access into the Internet after installing the router and finishing the web configuration. Please follow sections below to check your basic installation status stage by stage.

- Checking if the hardware status is OK or not.
- Checking if the network connection settings on your computer are OK or not.
- Pinging the router from your computer.
- Checking if the ISP settings are OK or not.
- Backing to factory default setting if necessary.

If all above stages are done and the router still cannot run normally, it is the time for you to contact your dealer for advanced help.

5.1 Checking If the Hardware Status Is OK or Not

Follow the steps below to verify the hardware status.

- 1. Check the power line and WLAN/LAN cable connections. Refer to "**2.1 Hardware Installation**" for details.
- 2. Turn on the router. Make sure the **ACT LED** blink once per second and the correspondent **LAN LED** is bright.

3. If not, it means that there is something wrong with the hardware status. Simply back to "2.1 Hardware Installation" to execute the hardware installation again. And then, try again.

5.2 Checking If the Network Connection Settings on Your Computer Is OK or Not

Sometimes the link failure occurs due to the wrong network connection settings. After trying the above section, if the link is stilled failed, please do the steps listed below to make sure the network connection settings is OK.

For Windows

The example is based on Windows XP. As to the examples for other operation systems, please refer to the similar steps or find support notes in **www.draytek.com**.

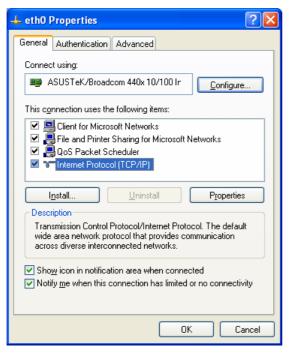

1. Go to Control Panel and then double-click on Network Connections.

2. Right-click on Local Area Connection and click on Properties.

3. Select Internet Protocol (TCP/IP) and then click Properties.

4. Select **Obtain an IP address automatically** and **Obtain DNS server address automatically**.

Internet Protocol (TCP/IP) Pro	perties 🛛 🛛 🛛 🔀					
General Alternate Configuration						
You can get IP settings assigned automatically if your network supports this capability. Otherwise, you need to ask your network administrator for the appropriate IP settings.						
Obtain an IP address automatic	cally					
\bigcirc Use the following IP address: -						
IP address:						
S <u>u</u> bnet mask:						
Default gateway:	· · · · ·					
⊙ O <u>b</u> tain DNS server address au	tomatically					
OUse the following DNS server a	addresses:					
Preferred DNS server:						
Alternate DNS server:						
	Ad <u>v</u> anced					
	OK Cancel					

For MacOs

- 1. Double click on the current used MacOs on the desktop.
- 2. Open the **Application** folder and get into **Network**.
- 3. On the **Network** screen, select **Using DHCP** from the drop down list of Configure IPv4.

0 0	Network	C
Show All Display	ys Sound Network Startup Disk	
	Location: Automatic

	Configure IPv6	?
Click the loc	ck to prevent further changes.	pply Now

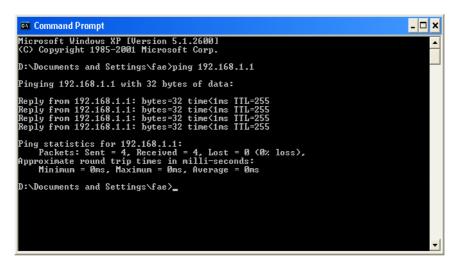

5.3 Pinging the Router from Your Computer

The default gateway IP address of the router is 192.168.1.1. For some reason, you might need to use "ping" command to check the link status of the router. **The most important thing is that the computer will receive a reply from 192.168.1.1.** If not, please check the IP address of your computer. We suggest you setting the network connection as **get IP automatically**. (Please refer to the section 5.2)

Please follow the steps below to ping the router correctly.

For Windows

- 1. Open the **Command** Prompt window (from **Start menu> Run**).
- 2. Type **command** (for Windows 95/98/ME) or **cmd** (for Windows NT/ 2000/XP). The DOS command dialog will appear.

- 3. Type **ping 192.168.1.1** and press [Enter]. It the link is OK, the line of "**Reply from 192.168.1.1:bytes=32 time<1ms TTL=255**" will appear.
- 4. If the line does not appear, please check the IP address setting of your computer.

For MacOs (Terminal)

- 1. Double click on the current used MacOs on the desktop.
- 2. Open the **Application** folder and get into **Utilities**.
- 3. Double click **Terminal**. The Terminal window will appear.
- 4. Type **ping 192.168.1.1** and press [Enter]. It the link is OK, the line of **"64 bytes from 192.168.1.1: icmp_seq=0 ttl=255 time=xxxx ms**" will appear.

Last login: Sat Jan 3 02:24:18 on ttyp1	5

2. Check if **IP** Address and Subnet Mask are set correctly (must identify with the values from your ISP) if you choose Specify an IP address.

5.5 Backing to Factory Default Setting If Necessary

Sometimes, a wrong connection can be improved by returning to the default settings. Try to reset the router by software or hardware.

Warning: After pressing **factory default setting**, you will loose all settings you did before. Make sure you have recorded all useful settings before you pressing. The password of factory default is null.

Software Reset

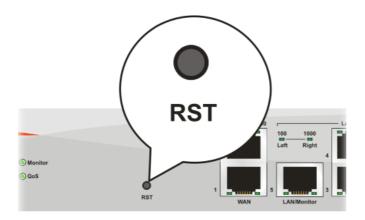

You can reset the router to factory default via Web page.

Go to **System Maintenance** and choose **Reboot System** on the web page. The following screen will appear. Choose **Using factory default configuration** and click **OK**. After few seconds, the router will return all the settings to the factory settings.

System Maintenance >> Reboot System		
Reboot Systen	I	
	Do You want to reboot your router ?	
	 Using current configuration 	
	O Using factory default configuration	
	OK	

Hardware Reset

While the router is running (ACT LED blinking), press the **RST** button and hold for more than 5 seconds. When you see the **ACT** LED blinks rapidly, please release the button. Then, the router will restart with the default configuration.

After restore the factory default setting, you can configure the settings for the router again to fit your personal request.

5.6 Contacting Your Dealer

If the router still cannot work correctly after trying many efforts, please contact your dealer for further help right away. For any questions, please feel free to send e-mail to support@draytek.com.
